UNIT 2 INFORMATION SYSTEMS IN HEALTHCARE DELIVERY

6 Electronic Health Records and Applications for Managing Patient Care, 87
Charlotte Seckman

Introduction, 87
Early Terms and Definitions, 88
Electronic Medical Record (EMR) versus Electronic Health Record (EHR), 88
EHR Components, Functions, and Attributes, 89
Sociotechnical Perspectives, 89
EHR Adoption, 89
Meaningful Use, 89
EMR Adoption Model, 91
Health Practitioner Role in EHR Adoption and Meaningful Use, 91
EHR Applications Used in the Clinical Setting, 92
Computerized Provider Order Entry (CPOE), 92
Electronic Medication Administration Record (eMAR), 93
Bar Code Medication Administration (BCMA), 93
Clinical Documentation, 94
Specialty Applications, 95
Clinical Decision Support (CDS), 95
Ancillary Systems, 95
EHR Benefits, 96
Cost, 97
Access, 97
Quality, Safety, and Efficiency of Care Delivery, 97
Stakeholder Perspectives, 97
Consumers, 97
Nurses, 97
Healthcare Providers, 98
Healthcare Organizations, 98
Insurance Payers, 98
State and National Governments, 98
Key Issues, 99
Cost, 99
Ownership, 99
Data Integrity, 99
Privacy and Confidentiality, 100
Standards, 100
Organizational Culture, 100
Human Factors, 100
Conclusion and Future Directions, 101

7 Applications for Managing Institutions Delivering Healthcare, 106
Michael H. Kennedy, Kathy H. Wood, and Gerald R. Ledlow

Introduction, 106
Vendor Resource Guides, 107
Major Types of Applications, 107
Financial Systems, 107
Practice Management Systems, 114
Materials Management, 115
Human Resources Information Systems, 118
Business Intelligence Systems, 121
Conclusion and Future Directions, 122

8 Telehealth and Applications for Delivering Care at a Distance, 125
Loretta Schlachta-Fairchild, Mitra Rocca, Vicky Elfrink Cordi, Andrea Haught, Diane Castelli, Kathleen MacMahon, Dianna Vice-Pasch, Daniel A. Nagel, and Antonia Arnaert

Introduction, 125
Examples of Successful Telehealth Programs, 126
Telehealth Historic Milestones, 127
Leading Telehealth Organizations, 127
Telehealth Technologies, 128
Synchronous or “Real-Time” Technologies, 128
Asynchronous or “Store-and-Forward” Technology, 130
Technical Standards in Telehealth, 130
Telehealth Clinical Practice Considerations for Healthcare Professionals, 130
Equal to or Better Than In-Person Care?, 130
Telehealth Clinical Competency, 131
Confidentiality, Privacy, and Informed Patients, 131
Scope of Clinical Practice, 132
Types of Clinical Telehealth Applications, 132
Telehealth Operational and Organizational Success Factors and Barriers, 132
B.E.L.T. Framework, 132
Operationalizing Telehealth, 133
Telehealth Acceptance and Training, 133
Telehealth Implementation, 134
Telehealth Challenges: Licensure and Regulatory Issues for Healthcare Professionals, 135
Licensure, 136
Credentialing and Privileging, 137
Reimbursement, 138
Malpractice and Liability, 138
Telehealth and Direct Patient Health Services, 138
Patient-to-Provider Telehealth-Delivered Care, 138
Remote Telehealth Home Visits and Biosensors, 139
Telehealth Technology and Healthcare Consumers, 140
Conclusion and Future Directions, 141
Telehealth Industry Growth, 142
Telehealth to uHealth, 142
Improve Healthcare Provider Shortages and Access to Care, 142

9 Home Health and Related Community-Based Systems, 147
Karen S. Martin and Karen B. Utterback

Introduction, 147
Evolution and Milestones, 148
Practice Models, 148
Home Health, 148
Palliative Care and Hospice, 149
Public Health, 149
Nurse-Managed Health Centers, 149
Other Practice Sites, 149
Similarities among Practice Models, 149
Standardized Datasets, 150
Outcome and Assessment Information Set (OASIS), 151
Continuity Assessment Record and Evaluation (CARE) Tool, 151
Hospice Quality Measures, 151
Patient Experience Surveys, 151
Supporting Home Health with Electronic Health Records and Health Information Technology, 151
Billing Solutions, 152
Point-of-Care Solutions, 152
Clinical Decision Support (CDS) Systems, 153
Standardized Terminologies, 153
Omaha System, 154
Description, 154
Clinical Example from Practice, 158
Conclusion and Future Directions, 161

10 Clinical Decision Support Systems in Healthcare, 164
Kensaku Kawamoto and Guilherme Del Fiol

Medication Dosing Support, 166
Order Facilitators, 166
Point-of-Care Alerts and Reminders, 167
Relevant Information Alerts, 167
Expert Systems, 169
Workflow Support, 170
CDS Impact, 170
Evidence of Effectiveness, 170
Examples of CDS Impact Studies, 170
Financial Impact of CDS, 171
CDS Adoption, 171
Challenges and Barriers to CDS Adoption, 171
CDS Best Practices, 172
Recent Progress toward Disseminating CDS on a National Level, 173
Value-Based Payment Models, 173
Meaningful Use Incentives for EHR and CDS Adoption, 173
Statewide Health Information Exchanges, 173
CDS Standards, 173
National CDS and Knowledge Management Initiatives, 173
Open Source, Freely Available Resources, 174
Research Challenges, 174
Conclusion and Future Directions, 174

11 Public Health Informatics, 178
Catherine Janes Staes, Marisa Wilson, and Leslie Lenert

Introduction, 179
Public Health: A Population Perspective, 179
Social and Political Challenges That Affect Public Health Informatics, 183
Sociological Context of Public Health, 183
The Value of Informatics for the Domain of Public Health, 185
Surveillance, 185
Immunization Information Systems, 187
Health Information Exchange, 189
Public Health Reporting, 189
Conclusions and Future Public Health Informatics Strategies, 192
Transforming Practice with New Strategies, 192
Advancing the Technical Infrastructure, 193

12 Technical Infrastructure to Support Healthcare, 197
Scott P. Narus

Introduction, 197
EHR Component Model, 197
Clinical Data Repository, 198
UNIT 3
PARTICIPATORY HEALTHCARE INFORMATICS AND HEALTHCARE ON THE INTERNET

13 The Evolving ePatient, 212
Sally Okun and Christine A. Caligtan

- Historical Background and Drivers of the ePatient Evolution, 212
- ePatient as a Pioneering Concept, 212
- Technology, Policy, and Legislative Influences, 213
- Characteristics of Online Healthcare Consumers, 216

- Convergence of ePatients, Clinicians, Patient-Centered Models of Care, and Informatics, 217
- Participatory Patient-Centered Healthcare, 217
- The New Role of Clinicians and Informaticists in ePatient Care, 218
- Health Informatics and ePatients, 219
- Personal Health Records, Transparency, and Access to Data, 219

- Evolution of Health 2.0 and Beyond, 220
- Health 2.0 Environment, 220

14 Social Networking and Other Web-Based Applications in Healthcare, 225
Diane J. Skiba, Paul Guillery, and Elizabeth S. Dickson

- What Is Social Media?, 225
- Social Media Tools, 226
- Social Networking, 226
- Blogging and Wikis, 227
- Microblogging (Twitter), 227
- Social Bookmarking, 227
- User-Generated Content, 227
- Social Media Statistics, 228
- Benefits of Social Media, 228
- Challenges of Social Media, 229
- Privacy and Confidentiality, 229
- Inappropriate Behaviors, 230
- Security, 231
- Regulatory Issues, 232
- Market Pressure, 233
- Policy, 234
- Guidelines for Writing Policies, 234
- Resources for Policy Development, 235
- Conclusion and Future Directions, 235

15 Personal Health Records (PHRs), 244
Bryan Gibson

- Definitions of the Personal Health Record, 244
- The Development of the Electronic Personal Health Record, 245
- Principles of an Ideal Personal Health Record, 247
- Proposed Benefits of an Ideal PHR, 248
- Types of Personal Health Records, 248
- Examples of Existing Personal Health Records, 248
- Current Evidence of Benefits of PHR Use, 250
- Experience of Care, 250
- Quality of Care, 250
- Cost and Utilization, 251
- Current PHR Use, 251
- Barriers to PHR Adoption, 251
- Awareness, 251
- Usability, 252
- Privacy Concerns, 252
- The Digital Divide, 252
- Interoperability, 252
- Law and Policy, 252
- Conclusion and Future Directions, 253
UNIT 4 PROJECT MANAGEMENT: TOOLS AND PROCEDURES

16 Identifying and Selecting an Information System Solution, 258
   Cynthia M. Mascara and Mical DeBrow
   Introduction, 258
   Strategic Vision and Alignment, 258
   Systems Development Life Cycle, 260
      Analysis and Requirements
      Definition, 260
      Project Planning, 264
      Develop or Purchase, 265
   Conclusion and Future Directions, 268

17 Implementing and Upgrading an Information System Solution, 271
   Christine D. Meyer
   Introduction, 271
      Reasons to Implement or Upgrade a Healthcare Information System, 272
   New Implementation versus an Upgrade, 276
      Decision Factors to Implement or Upgrade a System, 276
   Implementation and the Systems Life Cycle, 278
      Project Planning, 278
   Preparing for Go-Live, 284
      Big Bang or Incremental Go-Lives, 284
      Detailed Go-Live Plan, 285
      Education and Training, 285
   Go-Live, 286
   Postlive Maintenance, 287
   Conclusion and Future Directions, 287

18 Health Information Systems: Downtime and Disaster Recovery, 290
   Nancy C. Brazelton and Ann Lyons
   Introduction, 290
   Downtime Risk Assessment, 291
   Downtime and Response Planning, 295
      Clinical Impact and Planning: Acute Care Focus, 298
      Redundant Systems, 299
   Downtime Policies and Procedures, 300
   IT Impact and Planning, 300
   Disaster Planning, 300
      Disaster Recovery, 302
      Business Continuity, 302
      Communication, 302
      Responsibilities, 303
   Conclusion and Future Directions, 303

UNIT 5 QUALITY, USABILITY, AND STANDARDS IN INFORMATICS

19 Privacy, Confidentiality, Security, and Data Integrity, 307
   Nancy Staggers, Lisa Gallagher, Luciana Schleder Gonçalves, and Ramona Nelson
   Introduction, 307
   Definitions and Concepts, 308
   Legal and Historical Context, 308
      Caregiver Requirements, 308
      Patient Rights, 308
      Fair Information Practice Principles, 309
      Code of Ethics for Health Informatics Professionals, 309
   Principles, Laws, and Regulations Guiding Practice, 309
      National Privacy and Security Framework for Health Information, 311
      Laws and Regulations, 311
      Secondary Uses of Electronic Health Data, 313
   The Importance of Information Security, 314
      The Public Trust, 314
      Legal Requirements and Fines, 314
      Increasing Security Threats to Healthcare Data, 316
      Recent Changes in Health Data Practices, 316
      Current Security Vulnerabilities, 316
         External Events, 316
         Internal Vulnerabilities, 316
      Current Security Challenges, 317
      Managing Security Risks with Security Controls, 317
         Administrative, 317
         Technical, 318
         Physical, 319
      Resources, 319
   Conclusion and Future Directions, 320

20 Patient Safety and Quality Initiatives in Informatics, 323
   Patricia C. Dykes and Kumiko Ohashi
   Introduction, 323
      Definitions, 324
      National Initiatives Driving Adoption and Use of Health IT, 324
      National Efforts Related to Quality Data Standards, 324
      Evaluating Quality and Patient Safety, 327
Contents

Conceptual Framework for Patient Safety and Quality, 327
Medication Safety, 328
Chronic Illness Screening and Management, 329
Nursing Sensitive Quality Outcomes: Patient Falls and Pressure Ulcers, 329
Success Factors and Lessons Learned, 330
Conclusion and Future Directions, 330

Improving the User Experience for Health Information Technology Products, 334
Nancy Staggers

Introduction to Improving the User Experience, 335
The Current User Experience with Health IT Products, 335
Potential Benefits of Improving the User Experience, 335
Definitions of Terms and Their Relationships, 337
User Experience, 337
Human Factors, 337
Ergonomics, 337
Human–Computer Interaction, 338
Usability, 338
The Goals of Usability, 338
User-Centered Design, 338
Human–Computer Interaction Frameworks for Health Informatics, 339
Human–Computer Interaction Frameworks, 339
The Health Human–Computer Interaction Framework, 339
Essential Components for Improving the User Experience, 339
Selecting Methods to Improve the User Experience, 340
Discount Usability Methods, 340
Traditional Usability Methods, 341
Usability Measures and Tests, 343
Usability Questionnaires, 343
Selecting a Type of Usability Test, 343
Determining User Needs and Requirements, 343
Exploratory Test, 345
Assessment Test, 345
Validation Test, 345
Comparison Study, 346
Identifying Usability Issues with Fielded Products, 346
Steps for Conducting Usability Tests, 346
Conclusion and Future Directions, 347

Standards, 351
Tae Youn Kim and Susan A. Matney

Introduction, 352
Healthcare Data Standardization, 352
Definitions, 352
Evaluation of the Quality of Terminology, 353
Multidisciplinary Terminologies, 354
Nursing Terminologies, 359
Data Exchange Efforts, 363
HL7 Standards, 363
Terminology Harmonization, 363
Application of Standardized Terminologies, 363
Designing User Interface Using Terminologies, 364
Supporting Data Retrieval and Exchange, 364
Monitoring the Quality of Care, 365
Discovering Knowledge through Research, 365
Conclusion and Future Directions, 365

Unit 6 Governance and Organizational Structures for Informatics

Health Information Technology Governance, 371
Jim Turnbull and Kensaku Kawamoto

Introduction, 371
Health IT Governance: Need and Core Components, 371
Key Insights, 372
Respect Current Decision-Making Structures, 372
Shift in Organizational Mindset, 373
The Continual Increase in Demand for Health IT, 373
Governance Does Not Depend on Specific Technology Choices, 373
Coordination and Collaboration with Diverse Stakeholders, 373
Recommendations, 373
Conduct a Health IT Capability Maturity Assessment, 374
Investigate Peer Informatics Governance Models, 374
UNIT 7  EDUCATION AND INFORMATICS

26 Informatics in the Curriculum for Healthcare Professionals, 411
Helen B. Connors, Judith J. Warren, and E. LaVerne Manos

Introduction and Background, 411
Overview of Informatics and Health Technology, 411
Education Reform Initiatives, 412
Challenges of Technology-Enhanced Education, 414
Teaching and Learning in an Evolving Healthcare and Technology Environment, 414
The Role of Informatics in the Curriculum, 414
The Science of Informatics and Curriculum Design, 415

Framework for Informatics Curriculum, 415
Pedagogy, 415
Teaching Tools and Learning Strategies, 416
It Takes a Village: Roles and Competencies, 416
Educating the Generalist, 418
Educating Healthcare Specialists at the Graduate Level, 418
Educating the Informatics Specialist, 421
Educating the Informatics Researcher and Innovator, 421
Continuing Professional Development, 421

Conclusion and Future Directions, 421

27 Distance Education: Applications, Techniques, and Issues, 424
Irene Joos

Introduction, 424
Historical Development, 425
Evolving Terms, 426
Course Management Systems (CMSs): Major Vendors and Players, 428
Campus-Based Portals, 428
Proprietary CMSs and LMSs, 429
Open Source, 430
Partnerships, 431
Selection Criteria and Role of the Faculty, 431
The Future of CMS, 432
Instructional Design for Distance Education and Learning, 432
Learners and How They Learn, 432
CONTENTS

Goals and Objectives (Outcomes), 433
Instructional and Learner Activities, 433
Evaluation, 433
Student (Learner) Support Services, 433
Library, 433
Tutoring Services, 434
Online Textbook Distributors, 434
Help Desk, 434
Administrative Services, Academic Support, and Community Building, 435
Issues, 435
Legal, 435
Disability Issues, 437
Quality, 438
Readiness, 438
Conclusion and Future Directions, 439

UNIT 8 INTERNATIONAL INFORMATICS EFFORTS

28 Informatics Tools for Educating Health Professionals, 442
W. Scott Erdley and Kay M. Sackett
Introduction, 442
Comprehensive Education Information System (CEIS), 443
Computerized Teaching Tools, 444
Hardware, 444
Educational Software, 447
Impact on the Teaching and Learning Process, 450
National and International Perspectives on Education, 450
Impact on the Faculty Role, 450
Conclusion and Future Directions, 451

29 Simulation in Healthcare Education, 454
Valerie Howard, Kim Leighton, and Teresa Gore
Introduction, 454
Types of Simulations, 455
Fidelity, 455
Benefits of Simulation, 456
Challenges and Opportunities, 457
The Simulation Process, 459
Learning Theories Applied to Simulation, 459
Summary of Standards of Best Practice: Simulation, 460
Standards and Their Application to the Simulation Process, 460
Application of Simulation, 462
General Application of Simulation to Education, 462
Application of Simulation to Interprofessional Education, 462
Example, 463
Simulation Resources, 465

UNIT 9 THE PRESENT AND FUTURE

30 International Efforts, Issues, and Innovations, 473
Hyeoun-Ae Park
Introduction, 473
Key Initiatives in World Regions, 474
eHealth Initiatives in Europe, 474
eHealth Initiatives in the APEC Region, 476
eHealth Initiatives in the Pan American Health Organization (PAHO) Region, 478
eHealth Initiatives in Africa, 479
International Organizations with Informatics Implications, 481
eHealth and Health Informatics at WHO, 481
International Medical Informatics Association (IMIA), 482
International Standards Efforts, 484
International Organization for Standardization (ISO), 484
International Council of Nurses, 486
Health Level Seven (HL7), 489
International Health Terminology Standards Development Organisation (IHTSDO), 489
Global Challenges to eHealth, 489
Global Interoperability, 489
Human Resources for eHealth, 489
Information and Communications Technology Infrastructure, 489
Legal and Regulatory Framework for eHealth, 490
Conclusion and Future Directions, 490

31 Future Directions and Future Research in Health Informatics, 494
Nancy Staggers, Ramona Nelson, and David E. Jones
Introduction, 494
Futures Research or Futurology, 495
Defining Futures Research or Futurology, 495
Future Directions and Level of Change, 496
The Challenge of Anticipating Future Directions, 497
Approaches for Predicting, 497
Application of Futures Research, 499
The Future of Informatics, 499
Consumerism and Informatics, 500
EHRs 2.0, 500
Usability and Improving the User Experience for Health IT, 501
Big Data and Data Visualization, 501
Nanotechnology, 502
Conclusion and Future Directions, 506
Glossary, 509
Index, 517
